STRUCTURAL ADHESIVES

At the TC 1010 meeting of 20/9/2011 it was decided that all adhesive systems for the structural market approved to the requirements of SANS 1349 have to be tested in accordance with the relevant sections of SANS 10183 part 4 for compliance with SANS 10183 part 2.

It was also decided that manufacturers have a period of 18 months from the date of publication of the revised SANS 10183 part 2 to get the necessary approval.

The following is the wording as in the relevant minutes

Resolution:

The committee RESOLVED to reinstate the old SANS 10183: 2000: Terminology and Classification of Adhesives for Wood.

This standard is to valid for 18 months from the date of SANS 10183-2, Adhesives for wood Part 2: Requirements for structural applications. This will provide the adhesive industry with buy in time to gradually transit in applying SANS 10183-2.

The revised SANS 10183 part 2 was published in February 2014. This means that all adhesives for structural application will have to be tested to the complete battery of tests as required in SANS 10183 part 2 by September 2015.

At the moment only the relevant products as supplied by JOWAT and HENKLE (Purbond) are approved and certified to the requirements of SANS 10183 part 2.

We know the testing is a costly exercise but the adhesive manufacturers were part of this decision.

We want all SANS 1783 finger joint and SANS 1460 manufacturers to be aware of this and to discuss the situation with their adhesive suppliers.

Please discuss with us if you need more information.

STRUKTUELE LYME

Tydens 'n TC 1010 vergadering op 20/9/2011 was besluit dat alle goedgekeurde SANS 1349 lym sisteme vir struktuele hout vervaardiging getoets moet word volgens die betrokke gedeeltes van SANS 10183 deel 4 vir voldoening aan die vereistes soos in SANS 10183 deel 2

Dit was ook besluit dat die vervaardigers binne 'n periode van 18 maande vanaf die publikasie datum van die hersiene SANS 10183 deel 2 aan die standard moet voldoen.

Die volgende is die bewoording soos in die notule.

Resolution:

The committee RESOLVED to reinstate the old SANS 10183: 2000: Terminology and Classification of Adhesives for Wood.

This standard is to valid for 18 months from the date of SANS 10183-2, Adhesives for wood Part 2: Requirements for structural applications. This will provide the adhesive industry with buy in time to gradually transit in applying SANS 10183-2.

Die hersiene SANS 10183 deel 2 was in Februarie 2014 gepubliseer. Dit impliseer dat alle lym sisteme vir struktuele applikasie teen September 2015 getoets moet word volgens die reeks toetse soos vereis in SANS 10183 deel 2

Op die oomblik is slegs die produkte soos deur JOWAT en HENKLE (Purbond) voorsien goedgekeur en gesertifiseer volgens die vereistes van SANS 10183 deel 2.

Ons besef die toetse is duur maar die lym vervaardigers was deel van hierdie besluit

Ons vra dat alle SANS 1783 vingerlas en SANS 1460 vervaardigers hiervan kennis moet neem en dit met hul lym verskaffers moet bespreek.

Kontak ons asb indien meer inligting verlang word.
